

This is the title for this page  
under <h1> tag

# Assignment 1, Appendix Two

Iteration 1   Iteration 2   Iteration 3   Iteration 4

This is buttons to access  
different games.  
<button> tag used

Guessing the number game

## Instruction for each game

Input area

Guess !

Trials: number

Response

Under 'Guessing the number game', there are some  
texts in <p> tag to tell user what this game is about.  
Also, by using <input> tag that let users type  
associated value to play this game with button to  
submit by <button> tag next to it.

<div> tag is used for this area, depend on the button that user clicked  
from menu up there, id of div will be changed between  
"appendixTwoOne" ~ "appendixTwoFour" with style= "display:none" to  
style="display:block" as all divs are there but I do not want to show  
every unnecessary divs, e.g., if user clicked Iteration 1 button, I want to  
show them only guessing game in Iteration 1 not 2~5.

Every time User or Computer (for Iteration 3 and 4),  
number of trials will be increased.  
Also every time user or computer try to guess,  
response may be changed.  
They both are made with <p> tag
